

Scientists Develop Educational Modules on Nanotechnology

A team at the Center for Hierarchical Manufacturing at the University of Massachusetts Amherst has developed a systematic approach for producing repurposable educational videos that utilize a combination of live video and 3D animation to convey complex concepts in nanotechnology. The first group of videos were produced and evaluated by teachers and students in K-12, community college and university learning environments. The repurposable content enables adaptation for various audience levels, instructional approaches, and languages.

Prof. Mark Tuominen, University of Massachusetts Amherst
