

# Network Established to Spur U.S. Nanomanufacturing

The NSF Center for Hierarchical Manufacturing (CHM) at the University of Massachusetts Amherst, in teamwork with other academic, government and industrial programs devoted to the new technology of nanomanufacturing, has established an R&D network and cyber-clearinghouse for this industrially-important field. The National Nanomanufacturing Network (NNN) will sponsor networking, collaborative events, education and information exchange for America's nanomanufacturing research and technology community. Its digital library, InterNano, of nanomanufacturing technical information, resource directories and NNN events can be found at [www.nanomanufacturing.org](http://www.nanomanufacturing.org).
