

SciTech Café
presents

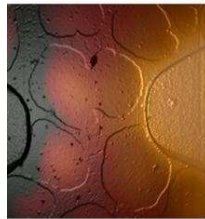

A scientist walks into a bar...

Prof. Kathy Aidala

...and lets you peer into the nanoworld!

Monday, June 24, 6-8pm
Amherst Brewing Company

What happens at the nanoscale?

- How small is “nano”?
- How can we manipulate atoms?
- How can a particle act like a wave?
- How does nanotechnology impact your daily life?

Dr. Kathy Aidala, Associate Professor of Physics at Mount Holyoke College, will reveal the unique properties of the nanoworld and how we interact with matter on such a small scale.

Admission, snacks and prizes are FREE! Open to all!

The PIs founded SciTech Café, which held its inaugural event in September 2012, and meets about monthly at a local restaurant. PI Aidala led the June event, introducing nanotechnology to the audience of over one hundred people.
